**Letter of Recommendation**

Since 2014, PA Technical Services began a project to create a hydro generation plant at Nkusi, on the south of Lake Albert. One of our most critical issues for the feasibility of the project was being able to transport all the machinery, equipment and supplies needed for the construction to a remote site without road connections. Fortunately, we met the partners of Semliki Rift Trading Company and they had exactly the solution we needed: a proven ability to transport our cargo in Lake Albert. We knew from the beginning that we were talking to people who know the trade and the region very well.

We began our works in 2015 and have used Semliki Rift's services to build the initial landing site in Nkusi, as well as transporting all of our equipment. Since the onset, their logistics services have always been safe and reliable and we routinely use them for re-supply. We also anticipate using their crane on-site for the delivery of the power plant, which will follow the construction of the dam and tunnel.

I am delighted with the services of Semliki Rift and recommend them without hesitation to any business in need of a trusted Marine Contractor on Lake Albert and anywhere else they should operate.

Sincerely,

Asa Katama
